

Platform Stair Lift - KL720

The Wessex Roll-on has been developed as a low-budget access solution, operating over straight flights of steps.

Compact Design

Ideal when space is at a premium, the Roll-on folds neatly away against the wall, in many cases only taking 230mm of space.

Easy to Install

The lift runs along attractive aluminium tracks, mounted either to pillars or directly to the wall.

Flexibility

The application of the 'Roll-on' is flexible and can be mounted to either the right or left hand side of the stairway. Suitable for internal and external applications.

Safe and Easy to Operate

Call stations fitted with key switches are located at top and bottom of the stairs, ideally placed for independent use.

The lift automatically unfolds and ramp lowers for easy access. Platform safety barriers fold and unfold automatically.

The internal controls are easy-to-use and the non-slip platform surface and sensitive edges provide additional safety. At the end of the journey, the exit ramp lowers and barriers raise. The lift can then be stowed at the push of a button.

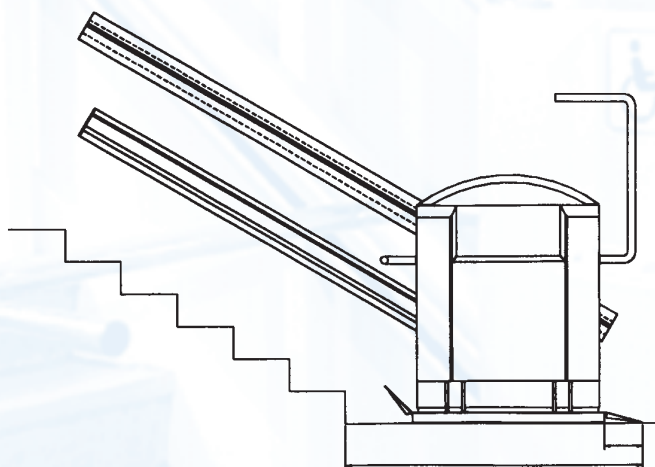

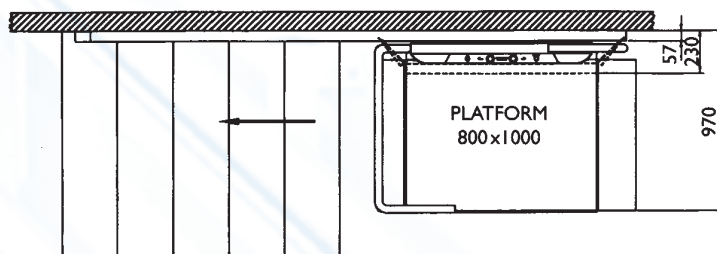

The lift may also be operated by an attendant using call stations or attendant control.

Platform Stair Lift - KL720

Technical details

Dimensions

Standard Specification

Platform: 800mm wide x 1000mm deep.

Safe working load: 225kg

Mounting System: The distance between the wall and the rail is 57mm. Total distance from wall with platform in stowed position can be as little as 230mm.

In the event of power failure the lift may be folded into stowed position manually.

Low maintenance - all parts are hard wearing and easily accessed.

Options

Battery backup to give emergency lowering in the event of a power failure.

Folding seat can be provided for non-wheelchair users.

Side Access platform for use where access is restricted.

Remote control for use by attendant.

Standards

Conforms to the European Standard ISO 9386-2 for Powered Lifting Platforms.

CE Marked in compliance with European Regulations

ISO 9001
FM 58435
